Art Unit: 1617

Applicant's election with traverse of Group II, nitrogen heterocycles, N-picolyl^Cniotinamide, and uncrosslinked polymers in Paper No. 4/22/03 and 12/24/03 is acknowledged. The traversal is on the ground(s) that there is no undue burden. This is not found persuasive because burden for the groups has been shown by their classification in entirely different groups. As to the election of species no burden need be shown. Applicants have the option of stating on the record that the species are equivalent.

The requirement is still deemed proper and is therefore made FINAL.

The election of species over the monomer elected from claims 14-15 is withdrawn.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 8-10, 12-17 are rejected under 35 U.S.C. 102(b) as being anticipated by WO 97/49387. WO '387 teaches poly(4-vinylpyridine) (page 28). As to the claimed property of increased water solubility of a poorly soluble drug, said property must be possessed by the anticipatory polymer because it is the same as that claimed.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1617

Claims 8-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Login et al.

Login et al. Teach polymers of 5-oxo-pyrrolidine with linker X. Polyvinyl alcohol and polymethacrylic acid backbones are specified (column 6 lines 66-column 7 line 25). The inherency argument in the first 102 rejection is incorporated herein as applied to the polymers of Login et al.

No claims allowed.
